

(a) Program dependency graph

```
# calc.py
def add(a, b):
    return a + b

def is_int(x) -> bool:
    """Check if x is an integer."""
    return isinstance(x, int)

class Calculator:
    def __init__(self):
        self.history = []
    def push(self, v):
        self.history.append(v)
    def total(self) -> int:
        """Sum integer entries."""
        s = 0
        for v in self.history:
            if is_int(v):
                s = add(s, v)
        return s
    def mean(self) -> float:
        return self.total() / len(self.history)
```

method top-level

(b) Score breakdown for Calculator. total

$\text{FIM} = \frac{\hat{H}\hat{I}}{\hat{H} + \hat{I} + \epsilon} = \frac{0.45 \times 0.65}{0.45 + 0.65} \approx 0.27$
 $\geq \tau \Rightarrow \text{Calculator. total is selected as a mask target.}$

(c) Selection in $\hat{H}$ - $\hat{I}$ plane
